

ABSTRACT OF THE DISCLOSURE

This invention has as its object to allow a direct print system to display on a user interface of a digital camera whether or not a printer which can
5 directly communicate with the digital camera has a function of automatically detecting a paper size and the like. To this end, according to this invention, in a print system that includes a digital camera, and a printer which can directly communicate with the digital
10 camera, the printer has transmission means for transmitting information indicating that it has a function of automatically detecting the paper size and type to the digital camera, and the digital camera has a user interface for notifying the user that the
15 printer has that function.
